

14th Annual Ottawa Neurosurgery Review Course Schedule  
 March 26 – April 2, 2026  
 Course Location – The Marconi Centre – 1026 Baseline Road, Ottawa

## Thursday March 26th

|               |   |   |
|---------------|---|---|
| 07:00 – 07:40 | Registration and Breakfast  |   |
| 07:40 – 08:00 | <b>Introductory Remarks</b><br><b>Q&amp;A</b>   | Dr Safraz Mohammed<br>Dr. Charles Agbi<br>Dr. Fahad Alkherayf |
| 08:00 – 08:40 | <b>Cranial Meningiomas</b><br><b>Learning Objectives</b><br>By the end of this presentation, participants will be able to: <ul style="list-style-type: none"> <li>• Identify key anatomical structures relevant to the surgical management of cranial meningiomas.</li> <li>• Select an appropriate surgical approach based on tumour location and surrounding anatomy.</li> <li>• Describe intraoperative strategies to minimize complications during meningioma surgery.</li> </ul>   | Dr. Almunder Algird   |
| 08:50 – 09:30 | <b>Management of Common CNS Infections and Surgical Treatment</b><br><b>Learning Objectives</b><br>By the end of this presentation, participants will be able to: <ul style="list-style-type: none"> <li>• Identify the most common infections affecting the central nervous system.</li> <li>• Describe indications for surgical intervention in CNS infections.</li> <li>• Apply clinical and imaging findings to guide treatment decisions</li> </ul>  | Dr. Charles Agbi  |
| 09:40 – 10:20 | <b>Epidemiology, Genetics, Molecular Biology of Intracranial Aneurysms. Management of Unruptured Intracranial Aneurysms.</b><br><b>Learning Objectives</b><br>By the end of this presentation, participants will be able to: <ul style="list-style-type: none"> <li>• List genetic syndromes associated with the development of intracranial aneurysms.</li> <li>• Identify molecular and histological features involved in aneurysm pathogenesis.</li> <li>• Recognize aneurysm characteristics that influence the risk of rupture.</li> </ul> | Dr. Alim Mitha  |
| 10:20 - 10:30 | <b>BREAK</b>  |   |

|               |  |                |
|---------------|--|----------------|
| 10:30 – 11:10 | <p><b>Surgical Management of Ruptured Intracranial Aneurysms</b></p> <p><b>Learning Objectives</b></p> <p>By the end of this presentation, participants will be able to:</p> <ul style="list-style-type: none"> <li>• Explain the rationale for treatment of ruptured intracranial aneurysms.</li> <li>• Select appropriate surgical or endovascular treatment strategies based on clinical and anatomical factors.</li> <li>• Identify risks associated with aneurysm treatment and strategies to mitigate these risks.</li> <li>• Describe the role of multidisciplinary care in aneurysm management.</li> </ul> | Dr. Alim Mitha |
| 11:10- 11:50  | <p><b>Chordomas and Chondrosarcomas: Current Management</b></p> <p><b>Learning Objectives</b></p> <p>By the end of this presentation, participants will be able to:</p> <ul style="list-style-type: none"> <li>• Differentiate between the pathological features of chordomas and chondrosarcomas.</li> <li>• Describe the role of multidisciplinary care in their management.</li> <li>• Apply oncologic surgical principles to the resection of skull base chordomas and chondrosarcomas.</li> <li>• Identify surgical approaches used in the management of these lesions.</li> </ul>                            | Dr. Idara Edem |
| 11:50- 12:30  | <p><b>Anatomy and physiology of functional neurosurgery targets</b></p> <p><b>Learning Objectives</b></p> <p>By the end of this presentation, participants will be able to:</p> <ul style="list-style-type: none"> <li>• Describe the anatomy and physiology of the basal ganglia, limbic system, and cerebellum relevant to functional neurosurgery.</li> <li>• Illustrate key limbic system pathways, including the hippocampal formation, Papez circuit, and amygdala.</li> <li>• Explain the role of these neural circuits in memory, emotion, and neurosurgical intervention.</li> </ul>                      | Dr. Zelma Kiss |
| 12:30-13:40   | <b>LUNCH</b>   |                |
| 13:40- 15:00  | <p><b>HOT SEAT Sessions</b></p> <p><b>Learning Objectives</b></p> <p>By the end of this presentation, participants will be able to:</p> <ul style="list-style-type: none"> <li>• Analyze common neurosurgical cases to determine appropriate diagnosis, investigation, and management strategies.</li> </ul>   | Dr. Alim Mitha |
| 15:00 –15:20  | <b>BREAK</b>   |                |

|               |  |                                     |
|---------------|--|-------------------------------------|
| 15:20 – 16:00 | <p><b>Endovascular Treatment Options for Ruptured Intracranial Aneurysms</b><br/> <b>Learning Objectives</b><br/> By the end of this presentation, participants will be able to:</p> <ul style="list-style-type: none"> <li>• Explain the rationale for selecting endovascular treatment options in ruptured aneurysms.</li> <li>• List commonly used endovascular techniques and adjuvant strategies for complex aneurysms.</li> <li>• Describe outcome grading systems used to assess treatment success and their clinical implications.</li> </ul>                            | Dr. Gwynedd Pickett                 |
| 16:00 – 16:40 | <p><b>Pathophysiology, Diagnosis and Management of Cerebral Vasospasm</b><br/> <b>Learning Objectives</b><br/> By the end of this presentation, participants will be able to:</p> <ul style="list-style-type: none"> <li>• Interpret investigations used in the evaluation of delayed neurological deterioration following subarachnoid hemorrhage.</li> <li>• Identify risk factors, epidemiology, and outcomes associated with cerebral vasospasm.</li> <li>• Apply current pathophysiological concepts to the selection of appropriate therapeutic interventions..</li> </ul> | Dr. Gwynedd Pickett                 |
| 16:40 – 17:30 | <p><b>The Visual Pathways I ·</b><br/> <b>Learning Objectives</b><br/> By the end of this presentation, participants will be able to:</p> <ul style="list-style-type: none"> <li>• Describe the anatomical organization and major connections of the visual pathways.</li> <li>• Identify clinical conditions associated with dysfunction of the visual pathways.</li> <li>• Apply anatomical knowledge to illustrative clinical cases.</li> </ul>   | Dr. Vivek Patel<br><b>(Virtual)</b> |
| 17:30- 18:20  | <p><b>The Visual Pathways II ·</b><br/> <b>Learning Objectives</b><br/> By the end of this presentation, participants will be able to:</p> <ul style="list-style-type: none"> <li>• Correlate visual pathway anatomy with clinical presentations of visual dysfunction.</li> <li>• Interpret clinical cases involving lesions affecting the visual pathways.</li> <li>• Apply visual pathway localization principles in exam-style scenarios.</li> </ul>   | Dr. Vivek Patel<br><b>(Virtual)</b> |

|               |   |                 |
|---------------|---|-----------------|
| 18:20 – 1900h | <b>CSF Physiology in Adult, IIH, NPH Management</b><br><b>Learning Objectives</b><br>By the end of this presentation, participants will be able to: <ul style="list-style-type: none"><li>• Identify key diagnostic investigations for idiopathic intracranial hypertension and normal pressure hydrocephalus.</li><li>• Select appropriate surgical management strategies for disorders of cerebrospinal fluid dynamics.</li></ul> | Dr. Michael Tso |
|---------------|---|-----------------|

IN THE MANAGEMENT OF  
ELEVATED INTRACRANIAL  
PRESSURE (ICP)

# CereLINK<sup>®</sup>

ICP monitoring system

Discover the Unseen

Missing the full picture with your  
current monitoring system?

## From ICP to IC More

**CereLink<sup>®</sup> ICP Monitoring System** provides uncompromised advanced continuous ICP monitoring—with minimal drift, MR conditional capability\*, durable, flexible ICP sensors, and advanced data presentation features.<sup>1,2</sup>
